

NARROW

(9" Max Abduction Width)

The *NEW* LEG SPASM SUPPORT SPLINT

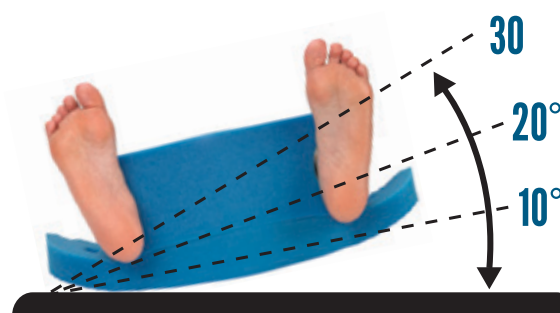

Indicated for Spasticity

Latex Free/ Hypoallergenic

Spasticity and Muscle tightening can be associated with other conditions, such as CP (cerebral Palsy), stroke, TBI and Brain damage.

Severe muscle spasms (uncontrollable leg movements) especially those with SCI, paralysis, paraplegia, quadriplegia, MS (Multiple Sclerosis) and head injury.

PRA Medical's Spasm Support Pillow can also be an asset to those with adductor spasticity and muscle tightening associated with other conditions, such as CP (cerebral palsy), stroke, brain damage caused by lack of oxygen and Lou Gehrig's disease (ALS).

Low density foam combines comfort, heel offloading and leg stabilization. As straps are pulled snugly, the soft foam cradles the ankles and prevents vascular constriction while creating a rocker bottom assisting with turning and repositioning

Benefits of Heelhip Narrow for the patient with leg spasms: Clinicians on spinal cord units can feel confident their patients with moderate to severe lower leg spasms are protected from injury and slipping out of the bed during uncontrollable spasticity.
